Yonathan Million

Software Engineer | Web, Mobile & Desktop Developer

Addis Ababa, Ethiopia | +251 940 848 780 | yonimillipro@gmail.com

Portfolio | GitHub: yonimillipro | LinkedIn

PROFILE

Software engineer building websites, mobile and Windows applications, APIs, and practical workflow systems. Works across React, TypeScript, React Native, Electron, and relational data. Combines independent product development with hands-on healthcare IT and website development at Dr. Saba Medium Clinic.

PROFESSIONAL EXPERIENCE

IT Officer & Website Developer - Dr. Saba Medium Clinic

2025 - Present | Addis Ababa, Ethiopia

- Lead website design and development, presenting clinic services through a responsive public experience.
- Support day-to-day digital systems and connect software decisions with practical clinic operations.

Independent Software & Product Development

2026 - Present | Web, mobile and desktop applications

- Build multiple mobile applications, a giveaway web platform, Windows productivity software, and clinic workflow systems.
- Work from requirements and user journeys through implementation, verification, and setup documentation.

SELECTED ENGINEERING PROJECTS

ClinicFlow - Clinic Management System

React | TypeScript | Fastify | PostgreSQL | Prisma | Docker

- Develop role-specific workspaces connecting registration, staged payments, nursing, consultation, and laboratory work.
- Implement API authorization, audit events, relational data models, and clinic LAN deployment and backup tooling.
- In development; live clinic deployment and operational validation remain pending.

Giveaway Hub - Android / iOS Application

React Native | Expo | TypeScript | Expo Router | TanStack Query | Supabase

- Build native discovery, authentication, consumer, company, and admin screens for the GiveawayFair platform.
- Reuse shared accounts and content while integrating native authentication storage, uploads, and notification handling.
- In development; backend release validation, push setup, and store submission remain pending.

Smart Timer for Windows - Desktop Application

Electron | React | TypeScript | Electron Vite | Vitest

- Build countdown, stopwatch, clock, Pomodoro, and Tabata modes with natural time commands and timestamp-based state.
- Integrate tray actions, global shortcuts, a compact overlay, suspend/resume handling, and multi-monitor persistence.
- Prepared installer and portable builds as an unsigned beta; final release checks remain pending.

Yonathan Million

Selected web work, technical skills & background

SELECTED WEB PROJECTS

Dr. Saba Medium Clinic - Public Website

React | Vite | Tailwind CSS | Motion

- Develop the clinic's public website with clear service information, responsive layouts, and contact paths.

Giveaway Fair - Web Platform

React | TypeScript | Vite | Tailwind CSS | Supabase

- Build customer, company, and admin experiences with multi-role accounts, ownership safeguards, and shared content.

Coinza Dashboard - Market-data Interface

React | Vite | Tailwind CSS | Supabase | CoinGecko

- Implement authentication, market-data views, wallet interfaces, and subscription-related screens.

Hotel Reservation System - Academic Full-stack Project

2023 - 2024 | React | PHP | MySQL | REST APIs

- Connect hotel discovery, room selection, and booking interfaces to a PHP and MySQL backend.

TECHNICAL SKILLS

Web: React, TypeScript, JavaScript, Next.js, Vite, Tailwind CSS, HTML, CSS

Mobile: React Native, Expo, Expo Router, TanStack Query

Desktop: Electron, tray integration, global shortcuts, Windows packaging

APIs and data: Fastify, Node.js, REST APIs, PostgreSQL, Prisma, Supabase, MySQL

UI and delivery: GSAP, Three.js, responsive design, accessibility, Git, GitHub, Docker, Vercel

Verification: TypeScript checks, linting, unit tests, builds, browser checks, documented release boundaries

EDUCATION AND TRAINING

BSc in Computer Science

HiLCoE School of Computer Science & Technology | September 2018 - December 2023

MERN Stack and Programming Fundamentals Certificate

2024 - 2025

- Training in MongoDB, Express.js, React, Node.js, CRUD workflows, and programming fundamentals.

DEVELOPMENT APPROACH

Understand the workflow; define journeys, roles, and data; build the application; verify behavior and error states; document setup, delivery, and remaining limitations.

Languages: English and Amharic

Current build: ServiceLink Mobile - In development.
